

W3C VCWG
TF Vocabularies for DPP

Carolynn Bernier, CEA

June 3, 2026

Agenda for June 3 F2F meeting

-
- Extremely brief intro on DPP
 - Interest for DPP vocab
 - Agreeing on what we want to achieve in this group

Digital Product Passport in a Nutshell

A **Digital Product Passport (DPP)** is an **online** collection of **machine-readable** product data accessed through a **data carrier**.

DPPs are being currently being introduced both as **mandatory** and **voluntary** instruments all over the world, for different reasons:

- Sustainability & Market Surveillance (EU) – **Mandatory**
- Innovation (all of industry)
- Traceability of ESG information (UN)
- Customs clearance efficiency (USA)
- Consumer protection (Vietnam)
- Digitalisation/efficiency (China)
- Etc.

Digital Product Passport in a Nutshell

A **Digital Product Passport (DPP)** is an **online** collection of **machine-readable** product data accessed through a **data carrier**.

DPPs are being currently being introduced both as **mandatory** and **voluntary** instruments all over the world, for different reasons:

- Sustainability & Market Surveillance (EU) – **Mandatory**
- Innovation (all of industry)
- Traceability of ESG information (UN)
- Customs clearance efficiency (USA)
- Consumer protection (Vietnam)
- Digitalisation/efficiency (China)
- Etc.

- DPP schemes/standards are a highly political issue.
- Both JSON & JSON-LD will be used for DPPs.
- Some DPPs will be issued as VCs.
- Each DPP scheme will likely use different vocabularies.
- The EU Commission will likely create vocabularies for the EU DPP.
- DPPs and organizational identities are closely related.

The problem I am trying to solve : Reusing product data from any DPP issued by any nation/organization.
→ Combining data from different DPP flavors.
→ Linking different DPPs & product-related attestations according from different DPP flavors.

2 major challenges for the success of DPPs

- ⚠ Companies may be forced to place multiple data carriers on their products to satisfy differing regulatory requirements in different markets.

- ⚠ Conflict of law: “Regulator A” could impose mandatory requirements on “Regulator B”.

Interest for DPP Vocab

- Editor: Ivo Ladenius, GS1 NL.
- Ivan Herman, W3C
- Ted Guild (Geotab), Covesa, DPP for automotive.
- Eva Blomqvist - Linköping University, ontologies for Circular Ontology & DPP
- Susanne Guth-Orlowski, 4theRecord, DPP expert
- Steve Capell, UN/CEFACT
- Robert David, Graphwise
- ...

Agenda for June 3 F2F meeting

■ Agreeing on what we want to achieve in this group

- Why use a VC for DPPs at all ???? This needs to be better understood in the EU DPP system context.
- Registry discussion : vocabularies & core vocabularies
- What is a “use case” ?
 - Issuing an EU-compliant DPP
 - Issuing an UNTP-compliant DPP
 - Issuing an XYZ-compliant DPP
 - Linking DPPs (possibly of different flavors) : a product with a DPP can have a component/material that has a DPP.
 - Linking product-related claims using different standards e.g. EU DPP containing a link to an UNTP claim.
 - Combining data from multiple DPPs of different flavors.
- Applicability of VCDM model to DPPs (EU/others)
 - Susanne’s question about credential subject...
